

ExitSafe

Solution for uncertainty in home departure routines.

Objective: Eliminate post-departure anxiety through a hybrid verification system.

Team 10

Laura Cuenca, Josep Audenis, Marc Vendrell, Nil de Creus and Armand López

The Problem

Home departure routines are often performed on autopilot, which creates uncertainty and anxiety.

Post-departure anxiety

Frequent doubt about whether we locked doors, turned off appliances, or closed windows when leaving.

Direct consequences

Loss of time from returning to check, increased stress levels, and reduced focus throughout the day.

Ideation Process

Analysis

Examine problems with detail and context.

Ideation

Generate multiple creative solutions.

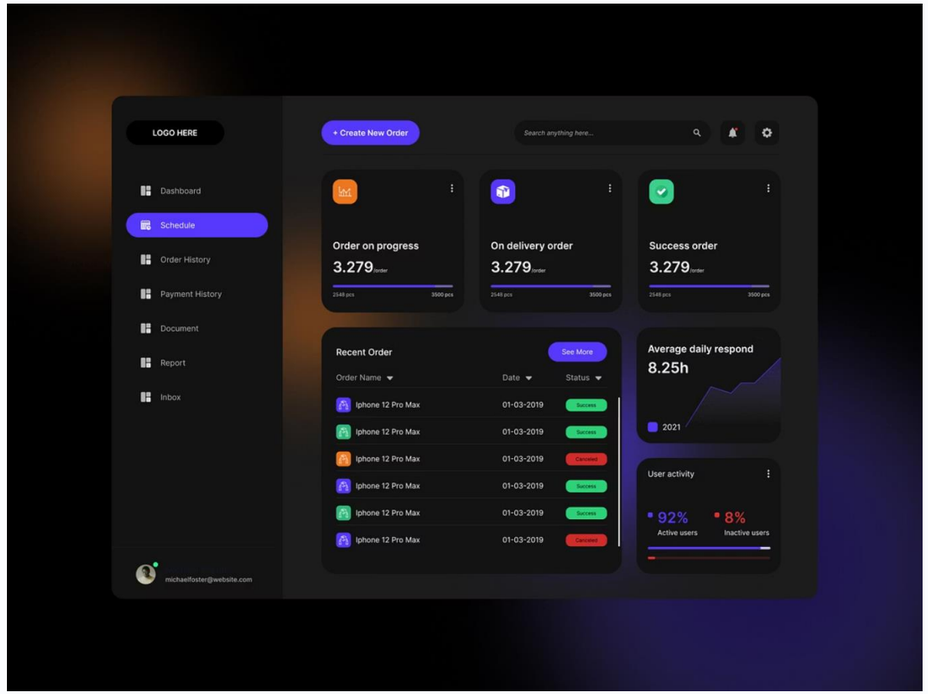

Evaluation

Apply criteria and checklists.

Selection

Choose the optimal solution with focus.

Physical Verification Panel

Concept

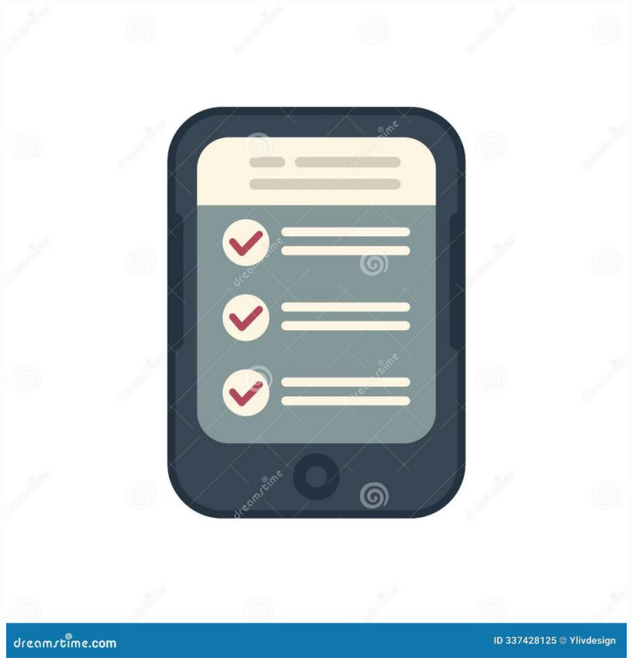

Physical panel installed near the exit to verify:

- ✓ Doors and windows closed
- ✓ Appliances turned off
- ✓ Gas/water valves secured

Key Advantages

- Does not require a smartphone
- Immediate tactile confirmation
- Intuitive and simple interface
- Works without electricity

Mobile App: Manual Confirmation

Concept

Mobile application with an interactive checklist to confirm tasks during the departure routine, with time logging.

Advantages

- Use on existing devices
- Low implementation cost
- Fully customizable list
- Verification history

Smart Sensor Verification System

Concept

IoT sensors installed on doors, windows, and appliances detect status automatically. The application displays verification in real-time without manual intervention.

Advantages

Fully automated verification

Real-time monitoring

Remote status control

Smart home system integration

Hybrid Physical Panel + Mobile App

Full Synchronization

The physical panel and the application update in real-time for constant control.

Key Advantages

Immediate tactile confirmation

Remote verification via app

Redundant backup

Inclusive accessibility

Voice Assistant for Departure Routine

Voice-activated assistant that guides the user through a smart checklist when leaving home.

Key Advantages

Hands-free operation

Step-by-step guidance

Integration with smart speakers

Natural interaction

Evaluation Framework

We evaluate each idea based on three critical dimensions to identify the most promising solutions:

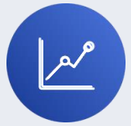

Desirability

Does it solve user needs and reduce anxiety?

Feasibility

Is it technically viable with available resources?

Viability

Does it have a sustainable business model and market potential?

Top Three Solutions

Hybrid Physical Panel + Mobile App

Combines physical confirmation with digital verification for redundancy and accessibility.

Smart Sensor-Based System

Fully automated IoT detection for real-time status with zero manual input.

Mobile App Manual Confirmation

Cost-effective solution using existing smartphones with a simple verification checklist.

Final Solution

Our ultimate solution, the Hybrid Home-Exit Verification System, integrates the best aspects of our ideation process to provide a comprehensive, reliable, and user-friendly experience.

Integrated Physical Panel

A tactile panel near the exit for immediate, glanceable status and manual confirmation.

Dynamic Mobile App

Remote monitoring, customizable checklists, historical data, and smart alerts for peace of mind.

Automated Sensor Network

IoT sensors automatically detect the status of doors, windows, and critical appliances in real-time.

Voice-Guided Assistance

Optional hands-free prompts and confirmations through integrated voice assistant technology.

How the Solution Works

Our Hybrid Home-Exit Verification System ensures peace of mind through a seamless integration of physical and digital components, designed to make your departure routine anxiety-free.

Physical Control Panel

An intuitive panel near the door provides an instant visual status of your home and offers tactile verification for critical checks.

Automated Sensor Network

Smart IoT sensors discreetly monitor doors, windows, and essential appliances, feeding real-time data to the system without any manual input.

Dynamic Mobile Application

Post-departure, the mobile app allows remote status checks, provides customisable checklists, and sends smart alerts for complete reassurance.

"Leaving Home" Confirmation

A single tap on a dedicated button initiates a final, comprehensive system check, logging your departure status and activating security protocols.

Value of the Solution

ExitSafe offers tangible benefits that transform your daily departure routine from a source of stress into a moment of confidence and peace of mind.

Reduces Anxiety

Eliminates post-departure doubts and worries, fostering a sense of calm and control as you leave your home.

Provides Reliable Confirmation

Offers clear, instant verification that all home security checks are complete, ensuring everything is as it should be.

Saves Time

Streamlines your departure routine, removing the need to return home or physically re-check items.

Improves Daily Focus

Frees your mind from nagging doubts, allowing you to concentrate fully on your work and activities throughout the day.

Thank You

For your valuable time and attention today.

We are confident that ExitSafe will bring peace of mind and simplify daily departures for countless users. We look forward to discussing the next steps and making this vision a reality.
